How does it work?

Drive more revenue from your Salesforce platform by ensuring your usage is optimized and that your key business objectives are aligned with the implemented features of your Salesforce platform.

The Salesforce Optimization Assessment provides you with a detailed analysis of your Salesforce usage including recommendations for improving how you use Salesforce, how the applications perform, and even the customer/employee experience around the platform. We do this through a series of short workshops with executives, business owners and technical staff to baseline the goals, review technical performance, and understand the driving business objectives that the platform needs to deliver on. In addition to the workshops, we will review your systems and provide recommendations that will help you get the most out of your investment.

About Salesforce

Salesforce unites your marketing, sales, commerce, service and IT teams into one unified platform that lets you put focus on your customers while helping your employees focus on the things necessary for delivering exceptional customer experiences.
