Assessing your security

Understand your Salesforce security risks and how to correct them before they become a problem. This allows you to be proactive in handling common issues that can cause serious problems down the line. Get the most from your Salesforce implementation while maintaining your peace of mind.

The Salesforce Security Assessment provides you with a detailed analysis of your Salesforce environment, any security issues that exist and recommendations for how you can remediate issues. In addition, we can provide other Salesforce recommendations to improve your performance and allow you to get more from your investment.

How it works

The assessment starts with a series of short workshops with executives, business owners and technical staff to baseline the goals and review security challenges. The team will then get hands on with your Salesforce implementation and run tests to identify potential issues. At the end of the assessment we will provide a final readout of our recommendations for changes both small and large and help you plan for how to implement them.

About Salesforce

Salesforce unites your marketing, sales, commerce, service and IT teams into one unified platform that lets you put focus on your customers while helping your employees focus on the things necessary for delivering exceptional customer experiences.
